

Another Peaceful Evening At The Hampton Inn® Thanks to Sloan Flushmate®

Before changing out to toilets equipped with Sloan Valve Company's pressure-assisted flushing system *FLUSHMATE*®, the 80-room Hampton Inn® in Longview, Texas had an unusual amount of guest dis-satisfaction. And that's something the Hampton Inn could not tolerate. After all, the company guarantees 100% guest satisfaction.

After opening his doors, manager Bob Patel was averaging five complaints every day due to 1.6 gravity-type low consumption toilets. Even the toilet manufacturer couldn't solve the problem, which was simply this: when you cut the amount of water used to flush a toilet down to 1.6 from 3.5 or more, gravity needs help.

"This problem has popped up before with gravity-type low consumption," explains David Bailey of International Supply, the local plumbing wholesaler. "So when Bob called, we knew exactly what to do. The fact is, we're selling more and more toilets with *FLUSHMATE* inside."

Toilets with Sloan *FLUSHMATE* inside use pressure to deliver superior performance with only 1.6 gallons of water per flush -as Bob Patel found out after changing

out all the gravity-type toilets. Complaints dropped down to zero per day.

FLUSHMATE will:

- ◆ Eliminate in-room bowl stoppages
- ◆ Eliminate double flushing
- ◆ Keep toilets cleaner
- ◆ Achieve high levels of water savings (up to 39% over 3.5 gravity-type toilets).

Before you consider gravity-type 1.6 low consumption, talk to other hotel owners and operators. *FLUSHMATE* is fast-becoming the only solution to water conservation and performance.
